Grabchuk Alex

Python Backend Developer

I am developing EidosAcademy, an educational platform built with Python, Django, and Django REST Framework. I work with data models, REST APIs, and PostgreSQL. I am looking for my first backend development role, where I can improve my skills within a team and receive feedback through code reviews.

Projects

EidosAcademy — studying web-application

Current time

- Developed the learning content structure, including categories, courses, modules, topics, and educational materials.
- Designed Django models and relationships for storing data in PostgreSQL.
- Implemented a REST API for managing courses and learning materials.
- Implemented user registration and JWT-based authentication.
- Prepared user flows and interface mockups in Figma.
- The application also includes a user dashboard, learning progress tracking, and content management through Django Admin. The project is deployed, actively maintained, and available over HTTPS at eidosacademy.ru.

Education

Aug 2024 - Aug - 2028 -

Kostroma state university

Bachelor's - Information systems and technologies

Skills

Python
Django Framework
Django REST Framework
REST API
